The Radiology of Joint Disease

with
John Miller, DC, DACBR

Adjusting the articulations of the human skeleton, especially the spine, is the foundation of treatment in Chiropractic. The Radiologic evaluation of these articulations is often a critical part of patient assessment. This weekend will be a review of the common and not so common afflictions of bone and joints as seen on Diagnostic Imaging.

Dr. Miller will present a large number of cases as seen on X-ray. Additionally, CT, MRI and Bone scans will be included in many instances.

Dr. Miller is a residency trained Chiropractic Radiologist in Seattle who directs a radiology lab, reads films, and teaches seminars for doctors and technologists.
